OpenWebIf Integration 3

OpenWebIf Integration

can be used in a web browser via OpenWebif. (When using wizos, OpenWwbif is a system plug in, so you do not have to install it.) In Openwebif *SmartEPGvu⁺* appears in the menu bar on the left and under Extras.

Once *SmartEPGvu⁺* is installed its can also can be used in a web browser via OpenWebif. // *SmartEPGvu⁺* then appears in OpenWebIF, both in the menu bar on the left and under Extras.

OpenWebIf expands the Vu+ receiver capabilities to include administration via browser, such as Internet Explorer Firefox, Opera, Safari...

These expanded capabilities are also used by various plugins, including *SmartEPGvu⁺* //.

This makes it possible //SmartEPGvu⁺ to carry out functions such as editing search requests directly in the browser.

This has the great advantage that the PC keyboard can be used to type text. You do not need to use the virtual keyboard of the Vu+.

Using *SmartEPGvu⁺* through the OpenWebIf is very much like working on the Vu+ itself, so that you can find your way around quickly.

SmartEPGvu⁺ also offers its own skin for the LCD Display so that the progress bar which allows the scan progress bar to be displayed during the scan, similar to the display on the TV.

SmartEPGvu⁺ is tested with OpenWebif from version 1.4.1+ onwards. *SmartEPGvu⁺* may not work correctly with older OpenWebif versions.

SmartEPGvu⁺ also works with the old web interface. However, only as a menu item under Extras, which links to a separate page `/smartepgui/index.html`. The web app therefore also runs „standalone“ under `/smartepgui/index.html`.

If the old and new interface are installed, *SmartEPGvu⁺* can only register to the old web interface. With the old interface, however, no picons are currently available.

If *SmartEPGvu⁺* is only displayed under Extras, and in the side menu and/or the key for searching from the EPG is not displayed, the „classic interface“ is probably used, i.e. the old Theme is enabled. In this case, go to Settings under Menu and activate „Use new

design“ there (set a tick).

After a page refresh at the latest, the *SmartEPGvu⁺* menu item should also be visible again. The „City Lights“ switch may then also need to be either turned on or off.

The *SmartEPGvu⁺* web interface can alternatively be called up directly in the browser with the IP address of the Vu+:

<http://<IP der VU>/smartepgui>

Explanations of the OpenWebIF options

Timers

The Reservations view shows existing timers.

By clicking on the name of the program, the description of the program is displayed.

Using this symbol  located to the right of each timer, you can see and access the timer related options for that timer. The available options are indicated by the timer icon. If the timer icon is a *SmartEPGvu+* timer icon, the timer can be edited, deleted, blocked, [Timer Types](#) changed or the [File Database Editor](#) called.

In the Customize field, VPS or EPG can be selected. Details about this function are explained in more detail under [VPS and EPG function](#).

When the File Database Editor is selected, after clicking this icon  a new window opens with the option to change the filter from block to unlock or vice versa. This option can be accessed for all test search recording timers and EPG events.

Search requests

Clicking on a search opens a window in which the search can be edited.

If you click on the search text in the previous view, another window opens in which the search can be easily adjusted using the keyboard.

In the upper area it is possible to display only searches with using the selection option „Show searches with timers“. It is also possible to search for specific terms using the „Filter text“ field.

A search can be deleted, searched for or blocked using this symbol  which is shown to the right of each search. It is also possible to delete or display the timers associated with the search.

A special function is the integration of a button in the OpenWebif event window to create search jobs for *SmartEPGvu+* or for setting a timer directly from the EPG. A search can be created by clicking on the *SmartEPGvu+* button.

If you click on the  a timer can be created, edited, blocked, etc. If the event has the timer from a search job, the „Set Timer“ button does not create a new job, but the existing one is opened. If the show has already been recorded before and is in the database, the  symbol will appear on the right.

Agatha Christies Hjerston (3)

Sun. 13. February 22:10 - 23:35 (85 min)

Krimiserie, Schweden / Deutschland 2021
Die Thriller-Autorin Ronda Svensson wendet sich verzweifelt an Hjerston und Klara: Ein Mord aus ihrem neuen, noch unveröffentlichten Roman hat sich jüngst in der Realität ereignet.

Ein Koch wird in seiner Kühlkammer eingesperrt und erfriert. So hat es sich Ronda ausgedacht. Und so passiert es tatsächlich in Wirklichkeit: Als Rondas Verleger tot aufgefunden wird, sehen sich Hjerston und Klara mit einer weiteren Tat aus Rondas Roman konfrontiert.
Darsteller:
Sven Hjerston - Johan Rheborg
Klara - Hanna Alström
Major - Maria Lundqvist
Nilkes - David Fakamachi Regfrors
Oscar - Björn Andrésen
Frank - Peter Kanerva
Regie: Lisa James Larsson
Buch/Autor: Patrik Cylström, Björn Paqualin, Jakob Beckman, Martin Luuk
Kamera: Frida Wendel
Schnitt: Elin Pötgis
Musik: Joel Donnell

Kick off!

Tue. 08. February 12:30 - 13:00 (30 min)

Matchday 21

Bayern's Julian Nagelsmann welcomes his former side Leipzig to the Allianz Arena. 18 points separate the clubs in the table, but Domenico Tedesco has brought Leipzig back to life. Are they a team to fear again? Meanwhile the Bundesliga's most efficient attacks and two of its most clinical strikers face off when Dortmund in second host Leverkusen in third. Plenty of thrills in store on Matchday 21!
