Release Notes 3

Release Notes

Version 2022-06-10 10:00

Plugins

- Search view: Any channel selection in all bouquets is now possible. It should therefore also be possible to deselect all the channels in a bouquet.
- Output of the host name in the log when starting SE.
- Automatic deletion time: No upper limit for the deletion time via plugin.
- Logo Path: more paths added.

** Web App**

- Background scanner settings
- Save button on the Settings page now always remains visible at the bottom of the screen.
- SmartEPG entry in the OpenWebIf menu added after Timer, otherwise it would be in the Information submenu in the latest owif version.

** Bug fixes**

- Automatic deletion after time did not work anymore.
- Directory selection: the .. directory did not point to the directory above it, but to its own.
- TimerEditor: Fixed 1h offset error when entering start and end time
- BGScan: the start of the background scan was not suppressed for manually started EPG scans.
- EPG scanner: caught a crash when the channel name cannot be resolved
- EPG Scanner: Blocked timer postpones or prevents the SmartEPGvu scan from running
- Infobox: Disabled all navigation buttons that could change the program in the main window.
- Info box: Immediate update of the icons in the info box, e.g. when a timer is set or changed.
- Changed the levels of the sub-windows (timer editor, path selection, ...) in the skins so that they are in front of the calling main window (e.g. path selection in front of the timer editor).
- SearchEditor: Cursor was over the legend after saving a new search.
