What is SmartEPGvu+? 3

What is SmartEPGvu+?

SmartEPGvu^{+} is an EPG plugin for the Vu+ receivers. The plugin was subsequently expanded to run on Australian Beyonwiz PVRs. The main goal for developing this plugin was to create an EPG that is both intuitive and simple to use. In addition, the plugin had to have an attractive design.

The plugin is used to scan EPG channel data and schedule recordings. It also has a sophisticated search function for automating recording. It combines functions otherwise provided by multiple plugins under a unified user interface.

After installation, *SmartEPGvu*$^{+}$ can also be used via OpenWebIF, which many users will find much easier to use than plugin itself.
